Ofloxacin:
Is a broad spectrum quinolone/fluoroquinolone bactericidal antibiotic that is active against both Gram positive and Gram negative bacteria .

Dexamethasone:
Is a corticosteroid with anti inflammatory properties

Indications:
Duoeffectum : (Moderate to Severe Mixed infection and Inflammation)
Inflammatory conditions of the palpebral and bulbar conjunctiva, cornea and anterior segment of the globe, such as:
1. Allergic conjunctivitis
2. Superficial punctate keratitis.
3. Corneal injury from penetration of foreign bodies or thermal burns.

Abbreviated Prescribing Information
Duoeffectum
Antibiotic & Anti-inflammatory ophthalmic solution
COMPOSITION : Each 1 ml contains: Ofloxacin 3.0 mg , Dexamethasone 1.0 mg , Benzalkonium chloride 0.06 mg (as preservative) , Hydroxypropyl methylcellulose (as vehicle) and other excipients. **PHARMACOLOGY :** Duoeffectum exerts a bactericidal effect on susceptible microorganisms by inhibiting DNA gyrase, an essential enzyme that is a critical catalyst in the duplication, transcription and repair of bacterial DNA. Dexamethasone is a corticosteroid with anti-inflammatory properties. **INDICATIONS :** Duoeffectum is indicated for corticosteroid responsive conditions of conjunctiva and cornea and for inflammatory conditions of the palpebral and bulbar conjunctiva, cornea and anterior segment of the globe bacterial infections or risk of bacterial infection. Also indicated in chronic anterior uveitis, corneal injury from chemical radiation or thermal burns or from penetration of foreign bodies, and for post-operative cataract, trabeculectomy and refractive surgeries. **CONTRAINDICATIONS :** Hypersensitivity to any of the components of the formulation. Epithelial herpes simplex keratitis (dendritic keratitis), Vaccinia,Varicella, and most other viral diseases of the cornea and conjunctiva. Mycobacterial infections of the eye. Fungal infections of the eye. Glaucoma or Tuberculosis diseases of the eye. **WARNINGS :** NOT for injection into the eyes. Notice to contact lenses wearers, this product contains Benzalkonium chloride as a preservative. Contact lenses should be removed before the application of Duoeffectum and you have to wait at least 15 minutes before reuse, known to discolour soft contact lenses. Benzalkonium chloride may cause eye irritation. **PRECAUTIONS :** Avoid contaminating the applicator tip with material from eye, fingers and other sources. As with other anti-infectives, prolonged use may result in over growth of non-susceptible organisms, including fungi. If superficial infection occurs discontinue use and institute alternative therapy. Duoeffectum should be discontinued at the first appearance of skin rash or any other sign of hypersensitivity reaction. Treatment should not be withdrawn too early, in order to avoid a renewed outbreak of the infection. **USE IN CHILDREN :** The safety and effectiveness of this preparation for infants have not been established. **USE IN PREGNANT AND NURSING WOMEN :** Risk factor C: There are no controlled studies in pregnant or nursing women. Drugs should be given only if the potential benefits justify the potential risk to the fetus. It is not known whether it can cause fetal harm when administered to pregnant women. It is also not known whether the components of this preparation are excreted in human milk; because many drugs are excreted in human milk, use with caution in nursing women. Consider discontinuing of nursing temporarily when using Duoeffectum. **DOSAGE AND ADMINISTRATION :** Apply 1 to 2 drops into each eye every 4 to 6 hours for the first 2 days, then reduce frequency as infection and inflammation are controlled and continue for 48 hours after healing. **STORAGE :** Store at temperature not exceeding 30º C. Use after opening for 30 days provided it is stored at temperature not exceeding 30º C . Shake well before use. **HOW SUPPLIED :** Carton box containing white (LDPE) plastic bottle contains 10 ml suspension with white (LDPE) plastic dropper and white PP plastic cover + insert leaflet.
