NEWS AND DISCUSSIONS

[Combined Nasal Goniotomy/Temporal Trabeculotomy](#)

In this video, Ahmed M. Abdelrahman, MD, shows a novel combination for circumferential angle treatment in primary congenital glaucoma, potentially replacing the classic goniotomy and trabeculotomy surgeries that treat localized portions of the angle.

TEST YOUR KNOWLEDGE

NGTT

- A novel cited and internationally accepted circumferential angle approach
- Combines two known techniques
- Easy learning curve
- Sparing the superior conjunctiva for a future surgery
- Could be performed on recurrent cases
- Effective 60 % IOP reduction
- No serious side effects

THANK YOU

See you next year
